Experience

Senior Backend Developer *Remote*
Journeyfront Inc *Aug 2025 – Present*

- Built and maintained **HRIS/ATS integrations** across 7 vendors with webhook-driven sync and cross-vendor field normalization, plus a vendor-agnostic **SFTP employee-data export** with per-client column mapping.
- Designed **Celery + SQS async pipelines** for decoupled background processing across integrations, public **REST API (OpenAPI)** endpoints for integration partners, and self-service **API key management** for account admins.
- Re-architected **CI** onto ephemeral self-hosted **AWS EC2** runners (Packer golden AMI, Terraform-managed autoscaling Lambda): GitHub Actions spend **$457 → $135/mo (~70%)**, per-leg test time ~15 → 2.5–6 min, job pickup 9+ min → ~90 s; earlier parallelized the PR test workflow (~**22 → 9 min**).
- Root-caused hidden CI infrastructure bugs, including a golden AMI that silently replayed ~**777 migrations** on every job and an autoscaling Lambda capped at a concurrency of 1.
- Built an **agentic N+1 autofix pipeline**: Sentry alerts trigger a headless **Claude Code** agent via Slack that fixes the queryset, adds a regression test, and opens the Jira ticket and PR unattended (**15+** issues).
- Set up **Claude Code engineering standards** for the backend (first repo in a company-wide rollout), including custom PR-review agents and a review-pattern database **mined from ~1,000 merged PRs**.
- Cut **Sentry** tracing volume by ~**60%** by dropping no-value transactions with no loss of error visibility; built outbound-request **observability** for integrations (per-account error rate/latency) that exposed silently dropped status updates to a client HRIS with no error logged.
- Technologies used: **Python** | **Django** | **MySQL** | **Celery** | **AWS** | Terraform | **Sentry** | GitHub Actions

Application Developer *Pune, MH*
Noovosoft Technologies *Sep 2022 – Aug 2025*

- Implemented an **AWS Lambda** function using **Terraform** and a **NAT Gateway** to overcome IP restrictions, enabling scalable architecture and replacing legacy data connectors.
- Engineered automated feed management system by integrating **TapFeed data**, reducing manual efforts by **80%**.
- Configured **pre-push Git hooks** to run tests and enforce **Black** formatting before code reached review.
- Mentored incoming interns on **engineering best practices**, **code quality**, and **test coverage**.

Backend Developer (Intern) *Jalgaon, MH*
Siteguide Pvt. Ltd. *Apr 2021 – Aug 2022*

- **Optimized application performance** by reducing load time by **70%** through efficient database queries and code enhancements; **developed reusable modules** shared across other projects.

Projects

FinSailor *Apr 2024 - Present*

- Developed a **full-stack investment tracking app** with broker integrations (Zerodha, Groww), portfolio health analysis, mutual fund tracking, and real-time market data via **Celery**. Tech: Django | Celery | PostgreSQL | React

CollaborativePY *Nov 2022 - Mar 2023*

- Developed a **web-based Collaborative IDE** with real-time code sharing, **text/video chat** (WebRTC), and synchronous pair programming. Tech: Django | WebSockets | WebRTC | Node.js

MahaSIG Portal *Jan 2022 - Mar 2022*

- Developed a Student-Industry-Government portal with **P2P/group chat**, **OTP verification**, automated emails, and **spreadsheet/PDF reports**. Tech: Django | Channels | Redis

Skills

Languages: Python, SQL, JavaScript

Frameworks & Libraries: Django, Django REST Framework, Flask, Celery, Vue.js, React

Data & Observability: MySQL, PostgreSQL, Redis, OpenSearch, Sentry, CloudWatch

Cloud & DevOps: AWS (EC2, Lambda, SQS, S3), Terraform, Packer, Docker, GitHub Actions, Nginx, Git, Claude Code

Education

Bachelor of Engineering Information Technology *Jun 2020 - May 2023*
Sinhgad Institute of Technology and Science, CGPA: ***9.64***

Diploma in Computer Technology *Aug 2017 - May 2020*
Government Polytechnic Nashik, Percentage: ***88.00%***

Achievements

Winner – Mindquisitive Hackathon among 75+ groups

Published – Write-ups on CI cost reduction and Sentry cost control at aniket-dg.github.io *Sep 2026*
